UNIQUE ASPECTS

The Honey Journey: From Hive to Home

Welcome to the heart of Majju Honey, where the life cycle of our honey is a testament to nature's wonders. Join us on a journey that begins in the picturesque farms and culminates in the golden jars that grace your homes.

A record of Limca Book entries had been completed by our **Director Mr. C. Jeyakumar**

ABOUT US

At Shamee Bee Farm, we understand the importance of producing natural and pure bee products. That's why each and every step of our production is overseen by our Quality Control team. From collecting honey by our expert beekeepers to packaging it in glass jars or cans, we ensure that every item contains the cleanest and best source, just the way Nature made them.

Who are we?

2004 We Started Business

Our journey begins with a love for bees and the natural sweetness they gift us. Founded in 2004, our story is woven with a dedication to bringing you the purest, most flavorful honey imaginable. From humble beginnings, we've grown into a hive of enthusiasts devoted to crafting an unparalleled honey experience.

PROCESS

EXPORT

ACACIA HONEY

Botanical name: Vachellia nilotica.

Harvesting Period:
April to June.

Acacia honey made from the nectar of black locust tree flowers. In India black locust tree is found in serene valley of Kashmir.

LITCHI HONEY

Botanical name: Sapindaceae.

Harvesting Period:
August – September

Litchi honey is a lighter variety with floral notes. This monofloral variety is not infused with litchi flavour but comes from the litchi blossoms.

MUSTARD HONEY

Botanical name: Brassica.

Harvesting Period:
mid-February to mid-March

Mustard Honey is a Monofloral (Single Origin) Honey and the bees swim in an ocean of Mustard farms. This honey naturally crystallizes due to its high glucose ratio and high enzymes & pollen count.

FOREST HONEY

Forest honey is made by bees from resins and sugary substances from trees or secretions of other insects.

All Harvest Period.

The bees collect these substances from the sap of the trees and transport them to the hive.

EUCALYPTUS HONEY

Botanical name: Myrtaceae.

Harvesting Period:
December to May.

Eucalyptus is a genus of more than 700 species of flowering plants in the family.

SIDR (BER) HONEY

Botanical name: Jujube.

Harvesting Period:
October to April.

Sidr honey comes from the flowers of the Sidr tree or Ziziphus Spina-Christ.

MULTIFLORA HONEY

Multiflora honey is created from the nectar of numerous species, such as herbs and medicinal plants, growing in deep forests with less pollution.

Harvesting Period: April-May.

It contains minerals flavonoids, probiotic enzymes, antioxidants pollen, and vitamins B and C.

BLACK FOREST HONEY

Honeydew honey is collected by bees from liquid secreted by certain insects as they absorb sap from plants.

Harvesting Period:
September-December.

It contains more water, minerals, amino acids, sucrose, and fructose than blossom honey.

“ Kind words are like honey,
Sweet to the soul and
healthy for the body. ”
